He said I created the ISO DVD correctly. I started it in an old Mac using the option key. I have a screen that has listed a wireless connection. I entered the password for this but I couldn't get over that point. There was an arrow point up to a box that said Windows. WTF? I'm trying to install MX Linux on a Mac mini. I couldn't overcome that screen and there were no suggestions. What can I say ? It works only and super fast! I needed to create a .iso from an old game CD and found nothing for 10. Even that suggested by the Microsoft App Store failed miserably. This, I found things right away and it was so fast that I did a mistake but pretty sure, the .iso file was really there where I expected it to be with the expected dimension. However ..... after mounting the .iso in dosbox can I see that the .exe files are missing what the hell goes here?!? Thank you for the program with a free open source license! I couldn't get this program to work. I have DVD I need to save as ISO because it doesn't work in the unit when I need it, but this computer reads it. But when I run the program, he didn't even read the 4 GB data disk, but instead created an ISO of only 73 MB. After mounting it, I can't read the ISO to see what there is in it. I have the last update of Win 10, so the operating system should not be a problem. And unfortunately the evaluation detail does not include a score for the SW that does not work. Perfect, great job - used this to write an ISO from the media creation tool that created a X64 2004 Win10 on a 8 GB USB-Iocreator made a perfect 4GB of Win10_2004_x64 USB stick from the 8 GB USB stick.
