

I'm not a bot

Thank you, Avast, for the excellent work you do. I run your antivirus software on both my Mac OS X and my Windows machines. You have the best products on the market, period. Eric S. Renewal prices for certain plans may increase. Review pricing here to see when new prices come into effect. Important information about your subscription A subscription is the commitment from Avast to you, our customer, that we will continuously work to protect, optimise and connect you virtually in exchange for an annual fee that we bill to your bank card or PayPal account. Your subscription fee enables Avast to support you with the service you selected to subscribe to until you cancel your subscription. If your subscription has expired we can help you here. The selected period for which you pay is measured in months and could be one month, one year or more years in length, depending on the service you selected to subscribe to from Avast. At the end of the selected period for which you have paid Avast will automatically charge your stored payment details for you to ensure ongoing, uninterrupted service. A fee for the next subscription period will be charged at the then current published price. The fees will be charged to your stored payment details up to 35 days prior to the anniversary of your subscription to Avast. These fees are subject to change. For annual subscriptions, we will notify you up to 65 days ahead of the anniversary of your subscription to remind you of the anniversary as well as the subscription fee that will be billed for the subsequent period. Avast products are sold as continuous subscriptions, a term used to describe the uninterrupted support we give you through our software for the period of your subscription. This means that your subscription continues without interruption unless you manually cancel it before the next billing date or in case we are unable to charge your stored payment details when due. We apply this concept of continuous subscription to ensure your service never gets interrupted and you continue to benefit from our service offering. Avast offers you many different services to which you can subscribe annually and we often discount the first year of that subscription to make it easier for you to onboard with us and enjoy our market leading services. This means that your first payment period may be discounted compared to the subsequent periods, a price difference that we make clear to you when you first selected to subscribe to our service. Prior to the anniversary of your subscription, we communicate the next payment period fee via a billing reminder. Avast only bills your stored payment method and has no other way of billing you for your ongoing Avast service. This means that you are responsible for agreeing to store your own payment method at first purchase and for keeping it updated to ensure that your service remains uninterrupted throughout the subscription period and relationship with us. You can cancel your subscription via the Avast Account that is linked to the email address you provided during the subscription purchase. Please visit here for more information and instructions on how to do this. You can request a refund by contacting Avast Customer Support here within 30 days of your initial subscription or the anniversary of your subscription. For more general information regarding Subscriptions and Renewals, read here. Whilst we take our commitment to you very seriously, we also rely on you to enroll or download, install and regularly update our software. This is important as we continue to improve and expand the service you have subscribed to, and we wish you to continue to benefit from our efforts on your behalf. These ongoing improvements and expansions remain subject to the Avast EULA, which you can find here to read. Introduction This test evaluates the phishing-page detection rates and false positive rates of various antivirus products, browsers, and VPNs as of November 2025. This comparative test is supported by at least three different vendors, aiming to drive improvements in anti-phishing solutions. Testing dates were determined by the testing lab and were not pre-disclosed to any party. Please note that this test does not replace our annual anti-phishing certification tests. infratech.es 824.01 KB 2 Likes You should perform virus scans and use malware removal software on all your devices. Any device that can go online can get viruses or other types of malware. This means that your phone may be vulnerable to viruses, as well as your Mac. You need to cover everything from Androids like a Samsung to iOS devices like an iPhone. A robust antivirus can also help protect you from phishing attacks and macro viruses. No matter what device you use, removing adware and protecting against ransomware is important. Avast's free antivirus software combines cutting-edge, AI-driven cybersecurity with a massive threat-detection network of over 435 million users that lets us protect our entire community in real time against online threats whenever they appear. Our industry-leading antivirus engine is just one of the many reasons why Avast Free Antivirus consistently earns high praise and top awards from PCMag, AV-Comparatives, AV-Test, and other independent experts. We have one of the best antivirus software solutions available, because we have the right antivirus protection for all your needs. In 2021, Avast released a new and enhanced product called Avast One, which is now available in the United States, United Kingdom, Canada, Australia, Switzerland, France, and Germany. Our VPN app is being updated. A reboot is needed to complete the latest update and keep it working.
