Android file transfer not working on mac

Why does android file transfer not work on mac. Why won't android file transfer work on my mac. Android file transfer not working on macbook air. Android file transfer not working on mac catalina. Fix android file transfer not working on mac. How do i fix android file transfer not working on mac.

Android/Mac Solution: This article shows a solution for Android file transfer app – it doesn't work on Mac OS. This problem, where you get Android error message "Can't connect to the device". This solution can also work on Microsoft Windows Systems, although I don't have a Windows system to test with to know for sure.) Last night I was trying to use Android file transfer program on my Mac OS system to transfer music to my Google Nexus 9, which now runs Android 6. After I connected my Nexus 9 tablet to the Mac with its USB cable and then launched the Android File Transfer App, I saw this error message on my Mac: it cannot access the Storage access device. If your device's screen is locked, disconnect the USB cable, unlock the screen, then reconnect the USB cable. This is how the Mac Error Message dialog appears: Unfortunately it is a misleading and useless error message, as the problem has nothing to do with the blocked Android device screen. The solution The solution to the problem on Android 7, Android 6 (and maybe Android 5) is to unlock your Android device (if it has not already been unlocked), knock down the list of notifications, then tap the "Transfer" notification. To recharge NOTIFICATION: by tapping that the notification appears the following dialog box On this dialog you want to tap the option "Transfer (MTP)", as indicated by that big red arrow. Note that this option has changed the names at least once. As of March 2017, it is now labeled "Transfer file", with the subtitle, "Transfer files to another device. When you do this, the Android file transfer app starts automatically (which it does on my Mac), or you can go ahead and start it manually, at which point you see the main Android file transfer window: once you see this window you can go ahead and start dragging files from your Mac (or Windows) computer into this Android file transfer window. Note: Make sure you click OK on your Mac as Gert notes in the comments below, before you tap MTP on your phone, make sure you click "OK" on your Mac so that the error message goes away. A quick note about transferring music files Note that if you feel like transferring music files on your Android device, you will want to transfer them to the music folder. To do this, double-click the folder to open it, then drag and drop music files from your PC to that folder. On a Mac you do this by opening a Finder window, browsing the folder where the music files are located – such as / Users / at / Music / iTunes / iTunes Music – and then dragging and dropping the files from the Mac Finder Window to the Android file transfer window. Then launch the "app" for your Android device and you should see your files within the area "Recent" in the homepage of that app. Summary In summary, if you get the access device storage error "when you use the Android File Transfer app while trying to transfer files from your Mac or Windows system to your Android Android tablet, I hope this solution is useful. apoorva35, thanks for the return to Apple support communities with this information. We are pleased to have published more details on your computer and the situation. Did you have the possibility to follow the Mac part of the troubleshooting of the support page offered above? Otherwise, there begins. Here's what he says. Check that your Mac OS is updated. Here's more information on keeping your Mac updated. Also, make sure that Android File Transfer is installed and updated on your Mac. If you have not already tried, restart your Mac. Often this simple step will update applications and software on the device to solve numerous problems that you can meet. Then, check your iPhone. Make sure the Android device is updated. Here is information on how to check and update the Android version. You also want to restart the phone. In most Android devices, you can press and hold the POWER button for about 30 seconds until the phone is restarted. Finally, check the USB connections. You can want to start by trying a different USB cable. Not all USB cables can transfer files. If possible, try connecting the phone into a different port on your computer to see if this helps to correct the problem. Otherwise, you can test the USB port on your computer by connecting a device other than your computer. We hope these steps offer further insights. Health! Frank Gibson 2021-01-18T07:26:21 If I can't connect Android to Mac with MTP work ADB? Eltima Team 2021-01-18T07:26:55 If MTP does not work, it is likely that ADB will not work due to any problem causing the connection error. ADB requires a further step to open the developer mode on Android to allow faster file transfers. Frank Gibson 2021-01-18T07:27:56 Can I do it on Android File Transfer? Eltima Team 2021-01-18T07:28:46 Android File Transfer does not give the option to make MTP or ADB but MacDroid does it! If you cannot connect the Android to Mac with Android file transfer, you can try troubleshooting steps, or download MacDroid and select both modes. ROBERT SMITH 2021-01-15T07:17:09 How can MacDroid solve the Android phone does not connect to Mac if it is an application that does what is Android File Transfer? Eltima Team 2021-01-15T07:17:51 We suggest trying a different application, especially MacDroid, because Android File Transfer is obsolete and has functionality that the most recent applications are not. MacDroid is updated every few months for example. ROBERT BUSH 2021-01-14T07:33:47 What is best to replace Android file transfer Mac does not work? MacDroid or SyncMate? I really don't really have the difference or which I should try if you download a replacement for the of Android files. Eltima Team 2021-01-14T07:34:53 Great question! MacDroid is ideal for fast file transfers while SyncMate is intended for more robust and ongoing synchronization needs. If you just want to move files between Android and Mac, go for MacDroid. If you need to work work work Through Mac and Android, go for SyncMate! HAROLD ROBINSON 2021-01-13T07:48:28 It is only for transferring Android files to Mac does not work or can I do it for PC? I want to move files from an old Samsung phone to my computer and to the new iPhone but you can't get the transfer of Android files to work. Eltima Team 2021-01-13T07:49:25 The troubleshooting steps for transferring Android files to PC are a bit different for passages for Mac. You can try using Google Drive or A Cloud service if Android file transfer doesn't work. You may also update the drivers! Jacob Lawson 2021-01-12T07:24:14 yeah Android file transfer doesn't work Mac but don't say what the MacDroids cost the use of the Eltima team 2021-01-12T07:25:05 MacDroid has a 7-day free trial to let you test if Android file transfer doesn't work. Then it's just \$ 1.67 / month to use all the Premium feature of the app, which is a steal when considering the way the app works and the fast and secure file transfer value between your devices And up to 5 Mac! Lucastuncan80 2021-01-11T07:43:23 Continue to run in the problem of the Android that does not connect to Mac. Transferring Android files downloaded but without dice. The door and the USB cable are good, close the updated check-down software, not a samsung so that it is not Kies or nothing, uninstalled app, but it still doesn't connect. Going to try MacDroid because AFT is giving me a headache. John Barry 2021-01-08T08:18:41 Love MacDroid! Just downloaded and setting it to save the images on my pixel on my Mac and work well so far. I'm glad to find a fairly easy to use app because I'm not good with computer things and this was easy to install and understand. Tired of file transfer Android doesn't work. Thomas Loos 2021-01-06T08:19:29 Trying to find out the reason for Android do not connect to Mac and found this article! To try to make the work of transferring Android files again but to think that it will be easier to use another app because my USB is fine, but I still can't make it work. Have a Samsung S9 BTW. Brian Tretter 2021-01-04T07:42:59 Android file transfer does not work on Mac? No shockers there. Dunno because someone wastes more time! It was a pain for years and the best options there outside to use in my opinion. You will prove MacDroid to see if it is as good as described for MTP transfers. Bob Harris 2021-01-04T07:36:07 Thank you for your advice. I didn't know what to do with the transfer of Android files to Mac doesn't work but I will try these steps to see if it solves it. Make the steps easy to understand, so I hope I understood it well! On a Mac, go to system preferences> Software upgrade and check if a new version is available. For Go to Settings> Software Update (or on some phones will be Settings> System> Advanced> System Update) and see if it is updated. How do I transfer files from transferring Android files to Mac?
