Here's how you can program your universal remote to your Sony devices. Turn on your device using the original remote or manual power button. Now, press and hold the Setup, Magic, or Code Search button on the universal remote. The button will be different for every remote brand. Let go of the button after a light on the remote turns on. Next, press the device button on the remote, such as the TV or DVD button. Enter one of the codes from the table using the numeric keys. If the code you entered is correct, the light on the remote will turn off, and you can start using it. But if the light does not turn off, the code is incorrect. In this case, repeat the process from the start and enter a different code this time. Point the universal remote towards your Sony TV and press the TV button on the remote. Next, press and hold the TV and power button simultaneously until the light on the TV turns off and then on. Now press the power button again to see if the remote is working. If it isn't, keep repeating the process from the start until your remote finds the correct code through the auto-programming feature. A universal remote can help you out in many ways, as it saves you from the hassle of managing multiple remotes. With the correct Sony universal remote codes, you can quickly set it up with your devices, including your TV. In case the first code you enter doesn't work, start the programming process again, but use a different code this time. If you're unable to connect your universal remotes to any of your Sony devices, we suggest getting in touch with Sony support to seek help from professionals. Our team of experts use a combination of independent consumer research, in-depth testing where appropriate - which will be flagged as such, and market analysis when recommending products, software and services.
