Azo uti test

AZO Test Strips help determine if you've got a UTI so you can plan your doc visit accordingly. Unlike wondering, they give quick & reliable test results to share with your doctor. Each strip tests for white blood cells & nitrites - like what most doctors use. With AZO Test Strips, get: Accurate results in 2 minutes, sanitary grip handle, same type of UTI test used by docs, and ready-to-read test strips. Use them at the first signs of a UTI: painful urination, burning, or frequent pee breaks. Warnin's & precautions: read package info, only for urine tests, no blood testing, expiry date check, keep outta reach kids & not to be taken internally. Store 'em in a dry place, avoid direct sunlight & refrigerate-free zone. Instructions: wash genital area clean, remove test strip from pouch & use ASAP, dip it into your pee stream or container for 1-2 secs, and lay it flat with the pads up. Read results at 1 min for nitrites & 2 mins for leukocytes. Given article text here The test strip should be aligned with the color blocks on the foil pouch, and each test pad matched to the corresponding color chart for that particular test. It's advised to ignore any colour change after reading the test pads at three minutes. The results can be read by comparing the test strips to the color blocks, matching the closest colour block containing the test. Note: This test may produce false results. Consult a physician before making any medical decisions. Some substances like riboflavin or products with dye active ingredients might affect the test results. People with colour vision deficiency should also be cautious when reading the results. There are some limitations to consider: - Leukocytes can give false-negative results due to tetracycline use. - High protein or elevated glucose levels in urine may cause low test results. - Urine pH above 8.0 may lead to a false negative leukocyte reading. - Nitrite results should be interpreted carefully, and high ascorbic acid levels may affect the results. Common signs and symptoms of a UTI include: - Painful urination - Frequent need to urinate - Burning sensation while urinating - Bladder spasms - Lower back pain Fever is also possible. If you experience any of these symptoms, immediately consult your physician. Given text is a product description and usage instructions for AZO Test Strips, which are used to detect Urinary Tract Infections (UTIs). The product claims to provide accurate test results in just two minutes, similar to those used by doctors. It also mentions that the product should not be used as a substitute for medical care and that test strip results should be shared with a healthcare professional. Additionally, the text highlights the importance of proper use and disposal of the test strips. Store the test strip in a dry place at room temperature between 15-30° C or 59-86° F. Do not refrigerate and keep it away from direct sunlight. Follow these steps: Wash your genital area with soap and water before testing, then remove the test strip from its packaging and use it right away. Hold the end of the test strip over a urinating stream for 1-2 seconds, making sure the test pads get wet. Alternatively, you can dip the test pads in a clean container filled with your urine for 1-2 seconds. Remove excess urine by running the edge of the test strip against the rim of the container. After removing the test strip from your urine, gently touch its edge to an absorbent material like a paper towel to remove any remaining urine. Lay the test strip flat with the test pads facing up and start timing. Compare the test results after 1 minute for nitrite and 2 minutes for leukocytes. Match each test pad's color to the closest block on the packaging, ignoring any changes after three minutes. Please note that this test may produce false results. Consult a doctor before making any medical decisions. The test could be affected by substances like riboflavin or products containing dyes, and reading results may be difficult for people with color vision deficiency. Looking for UTI Symptoms? Here's What You Need To Know UTIs can be serious if not addressed promptly, especially when symptoms persist for more than 4 hours or when taking antibiotics. Nitrates in your diet might also trigger them The common signs and symptoms of a UTI are: Painful urination Frequent need to urinate Burning sensation while urinating Bladder spasms Lower back pain If you experience any of these symptoms, seek medical attention immediately Learn more about UTI symptoms and diagnosis on our website UTI Detection Made Easy with AZO Test Strips There's a big difference between suspecting you might have a UTI and knowing it's time to visit your doctor. With AZO Test Strips, you can quickly detect the presence of Leukocytes (white blood cells) and Nitrites in your urine - just like doctors do. Are you experiencing UTI symptoms? AZO UTI Test Strips can give you quick results at home. But how do you read these test strip results? This guide will walk you through everything you need to know about Azo UTI test strip results. How to Use Azo UTI Test Strips Before we dive into the results, let's discuss how to use Azo UTI Test Strips effectively. Here are the steps: Wash your hands with soap and water. Collect a urine sample in a clean container. Dip the test strip into the sample for the specified time. Remove the strip and shake off excess urine. Wait for the designated time for results to develop. Interpreting Azo UTI Test Strip Results Azo UTI Test Strips measure nitrites and leukocytes levels, which are indicators of a urinary tract infection. Here's how to read the results: Negative Nitrite Result : If the pad remains colorless or turns slightly pink, it indicates a negative result - no significant bacteria in your urine. Positive Nitrite Result : If the pad turns dark pink or purple, it suggests a positive result - high levels of bacteria in your urine, possibly indicating a UTI. Negative Leukocyte Result : If the leukocyte pad remains colorless or turns slightly pink, it indicates a negative result - no significant white blood cells in your urine. Positive Leukocyte Result : If the leukocyte pad turns dark pink or purple, it suggests a positive result - high levels of white blood cells in your urine, indicating inflammation or infection. What to Do If You Get a Positive Result... You got a possible UTI from using Azo UTI Test Strips? Don't rely solely on them, consult a doc ASAP! They might ask for a urine culture to confirm the infection and prescribe some meds. You've got questions about these test strips? Well, they're useful but not super accurate, so don't count on 'em alone. Results usually pop up in 1-2 minutes if you follow the instructions right. And yeah, talk to your healthcare provider before using them during pregnancy - they'll give you personalized advice. Just a heads up: these test strips are for grown-ups only, not kids or people with certain health issues. Interpret those results carefully and see a doc if it's positive!
