Groups keyboard shortcuts have been updated. Mockito version 2.18.3 was upgraded to 3.5.13, while Robolectric version was also upgraded from 3.8 to 4.4, and Gradle version changed from 3.3.1 to 4.0.0. java.lang.UnsupportedClassVersionError occurs due to a mismatched Java Runtime version while trying to create a mock object using Mockito. The class 'android/os/Bundle' was compiled with a more recent version of the Java Runtime (class file version 53.0), whereas the current Java Runtime only recognizes versions up to 52.0. This error is rooted in the ClassLoader's inability to define classes due to incompatible class file versions. Mockito version 3.5.13 upgrade causes issues with Android classes, leading to test failures, despite being compatible with Java 8. The problem persists due to inlined mocks and limitations with byte-buddy instrumentation.
