Milady cosmetology book pdf chapter 11

Print test Fine hair is _____ than coarse or medium hair.What 5 things are a part of the integumentary system?The tube-like depression or pocket in the skin or scalp that contains the hair root is the _____.The process whereby living cells mature and begin their journey up the hair shaft is _____.Hair texture is classified as _____.Salt bonds account for about _____ of the hair's overall strength.What is the measurement of individual hair strands on 1 square inch of the scalp?Dandruff can easily be mistaken for _____.Long, coarse, pigmented hair found on the scalp, legs, arms and bodies of males and females.What are dry, sulfur-yellow, cup-like crusts on the scalp?To help minimize tangles in extremely curly hair when washing, you should use _____.Vellus hair is also known as _____.The shape of the hair strands; described as straight, wavy, curly, and extremely curly.What is the term for the spiral shape of a coiled protein?Which type of hair almost never has a medulla?The part of the hair located below the surface of the epidermis is the _____.Bonds that cross-link the polypeptide chains together and are responsible for the extreme strength and elasticity of human hair.A weak, physical, cross-link side bond that is easily broken by water or heat.Oily scalp and hair can be treated by properly washing it _____.androgenetic alopecia"; hair loss characterized by miniaturization of terminal hair that is converted to vellus hair; in men it's (male pattern baldness)What is the scientific study of hair, its diseases, and care?Scalp massage _____ hair growth.Shaving, clipping, and cutting the hair on the head _____.What is the average growth of healthy scalp hair?Fungal infection characterized by dry, sulfur-yellow, cup-like crusts on the scalp called scutula.What is the technical term for beaded hair?What is the medical term for dandruff?"hirsuties" ; condition of abnormal growth of hair, characterized by the growth of terminal hair in areas of the body that normally grow only vellum hair.What is the middle layer of the hair?The infestation of the hair and scalp with head lice is called _____.Strong chemical side bond that joins the sulfur atoms of two neighboring cysteine amino acids to create one cystine, which joins together two polypeptide strands like rungs on a ladder.Tinea is characterized by _____.The oil glands in the skin that are connected to the hair follicles are the _____ glands.Which type of melanin provides natural colors ranging from red and ginger to yellow and blond tones?Outermost layer of hair; consisting of a single, overlapping layer of transparent, scale-like cells that look like shingles on a roof.What is the naturally occurring fungus that causes the symptoms of dandruff when it grows out of control?Severe case of dandruff characterized by an accumulation of greasy or waxy scales mixed with sebum, that stick to the scalp in crusts.Long, coiled complex polypeptides made of amino acids.Compared to pigmented hair, gray hair is _____.What are the chemical bonds that hold together the amino acid molecules?For chemicals to penetrate a healthy cuticle hair layer, they must have _____.Variety of canities characterized by alternating bands of gray and pigmented hair throughout the length of the hair strand.Congenital canities manifests _____.The tube-like depression or pocket in the skin or scalp that contains the hair root.The portion of the hair that projects above the epidermis.What is the medical term for ringworm?The _____ is a tiny, involuntary muscle in the base of the hair follicle.Bald men are commonly perceived as _____.A _____ bond is a physical bond easily broken by water or heat.Thickness or diameter of the individual hair strand.What are the two parts of a mature strand of human hair?What is an oily substance secreted from the sebaceous glands?What is the technical term for split ends?What is a condition of abnormal hair growth on areas of the body?What is a highly contagious skin disease caused by a parasite called a mite that burrows under the skin?abnormal hair lossThe medulla is composed of _____ cells.What is the technical term for brittle hair?Easily absorbs moisture; in chemistry terms, capable of combining with or attracting water (water-loving)By age 35, almost _____ percent of both men and women show some degree of hair loss.What is the ability of the hair to absorb moisture?Temporary hair loss experienced at the conclusion of a pregnancy.Compared to hair with high porosity, chemical series performed on hair with low porosity require _____.Hair that forms in a circular pattern on the crown of the head.Scalp hair grows _____ on women than on men.What is the long, coarse, pigmented hair found on the scalp, legs, arms, and bodies of males and females?Inflammation of the subcutaneous tissue caused by staphylococci; similar to a furuncle but larger.A carbuncle is similar to a furuncle, but is _____.Process by which newly formed cells in the hair bulb mature, fill with keratin, move upward, lose their nucleus, and die.Total scalp hair loss is known as _____.The bonds created when disulfide bonds are broken by hydroxide chemical hair relaxers after the relaxer is rinsed from the hair.The anagen phase generally lasts from three to five _____.What is a tuft of hair that stands straight up?What is the technical term used to describe gray hair?What is the technical term for classic dandruff?Dandruff is believed to be caused by a _____.Coarse hair is _____ than fine hair.Ability of the hair to stretch and return to its original length without breaking.The _____ is the lowest part of a hair strand.What is an autoimmune disorder that causes affected hair follicles to be mistakenly attacked by a person's own immune system?The _____ is the outermost layer of hair.Naturally resistant to being penetrated by moisture.What are the five main elements that make up the chemical composition of human hair?Finasteride is an oral prescription medication for hair loss that is meant for _____.The body can produce _____ of the _____ that make up hair.Wet hair with normal elasticity will stretch up to _____ of its original length.Name the COHNS elements. (The 5 elements that make up human hair, skin, tissue, and nails, can be almost any shape hair, skin, nails, & glands Carbon, Oxygen, Hydrogen, Nitrogen, and Sulfur carbon, oxygen, hydrogen, nitrogen, & sulfur "resting phase" ; the final phase in their hair cycle that lasts until the fully grown hair is shed.Complete loss of body hair.What is the technical term for knotted hair?The _____ phase signals the end of the growth phase. "end bond", chemical bond that joins amino acids to each other, end to end to form a polypeptide chain.Hypertrichosis is also known as _____.Cross-sections of hair _____.A weak, physical, cross-link side bond between adjacent polypeptide chains.Boil; acute, localized bacterial infection of the hair follicle that produces constant pain.Hair follicles are NOT found on the _____.What is the innermost layer of the hair?What is the growth phase during which new hair is produced?Hair is approximately _____ percent protein.Hair flowing in the same direction, resulting from follicles sloping in the same direction.Asians tend to have _____.The brief transition period between the growth and resting phases of a hair follicle. It signals the end of the growth phase.The most frequently encountered fungal infection resulting from hair services is _____. Top reviews Most recent Top reviews This preview shows page 1 - 4 out of 16 pages. 112CHAPTER 11 | PROPERTIES OF THE HAIR & SCALPDate: Student: Text Pages: 222-251why studyPROPERTIES OF THE HAIR AND SCALP?a)b)c)Discover the Structure of Hair3. . meaning "hair," and . meaning "the study of." 4. A mature strand of human hair is divided into two parts: the, , the portion located below the surface of the epidermis, and theof the hair that projects above the epidermis.1.All professional hair services must be based on a thorough understanding of thegrowth, , and composition of hair.2.List below why it is important for a cosmetologist to study and understand theproperties of the hair and scalp.is the scientific study of hair and its diseases and care, which comes from the Greek words11CHAPTERPROPERTIES OF THE HAIR & SCALP The document you are viewing contains questions related to this textbook. Expert Verified CHAPTER 11 | PROPERTIES OF THE HAIR & SCALP1135. Match the five main structures of the hair root with their description. (page 225)1.Hair folliclea)Small, cone-shaped elevation located at the base ofthe hair follicle that fits into the hair bulb2.Hair bulbb)The tube-like depression or pocket in the skin orscalp that contains the hair root3.Dermal papillac)Small, involuntary muscle in the base of the hairfollicle4. Arrector pili muscle d) The oil glands in the skin that are connected to thehair follicles5.Sebaceous glands e) The thickened, club-shaped structure that forms thelower part of the rootTrue False6. The lowest part of the hair strand is called the hair.11.The sebaceous glands secrete a fatty or an oily substance calledwhich lubricates the skin. 12.Identify the parts of the skin and hair illustrated below. 6.Hair follicles are distributed all over the body, with the exceptions of: (page 225)a) b) 7.More than one hair will never grow from a single follicle. 9.Which part of the hair root contains the blood and nerve supply that provides thenutrients needed for hair growth? 10.Which muscle causes goose bumps when it contracts due to strong emotions or a coldsensation? 114CHAPTER 11 | PROPERTIES OF THE HAIR & SCALP15. The outermost layer of the hair is the16. Describe the hair cuticle layer.18. If you hold the end of a single strand of hair in one hand and then grasp it between thethumb and forefinger of the other hand and move them down the hair shaft, the hair will19. Why must oxidation haircolors, permanent waving solutions, and chemical hair relaxershave an alkaline pH? 20. Which layer of the hair is the cortex?21.What percentage of the total weight of hair comes from the cortex? 70 Questions | Total Attempts: 5160 The scientific study of hair, its diseases, and care is called: The two parts of a mature strand of human hair are the: Hair shaft and hair follicle Hair root and hair follicle The tube-like depression or pocket in the skin or scalp that contains the hair root is the: Hair follicles are not found on the: The _____ is a tiny, involuntary muscle in the base of the hair follicle. A oily substance secreted from the sebaceous glands is: For chemicals to penetrate a healthy cuticle hair layer, they must have: The medulla is composed of _____ cells. The process whereby living cells mature and begin their journey up the hair shaft is: The five main elements that make up the chemical composition of human hair are carbon, oxygen, hydrogen, and . The chemical bonds that hold together the amino acid molecules are called: Which type of melanin provides natural colors ranging from red and ginger to yellow and blond tones? To help minimize tangles in extremely curly hair when washing, you should use: Strong scalp manipulations _____ of its original length. Oily scalp and hair can be treated _____ by properly washing it: With conditioning shampoo Which type of hair almost never has a medulla? The growth phase during which new hair is produced is: The average growth of healthy scalp hair is: 1/2 inch (1.25 cm) per week 1/2 inch (1.25 cm)per month 1 inch (2.5 cm) per month The technical term used to describe gray hair is: A condition of abnormal hair growth on areas of the body is: The medical term for dandruff is: Real Estate Law Copyright Tax Insurance
