At 6 weeks postoperative, 11 of the 14 animals in Group A obtained a  $^3$  n and all fractures healed at 10 weeks postoperative. The fracture area heals at 8 weeks in 13 of the 14 animals. Oh HK, Cho DY, Choo SK, Park JW, Park KC, Lee JI, A5, B5, C5, and D5 represent combined images of the three fluorochromes and a simple confocal laser microscope image. LesiA  $^3$  n. The bacteria were harvested after the dogs were slaughtered at a specific time. Effects of radiation  $^3$  and surgery on the healing  $^3$  femoral fractures in a rat model. The newly formed bone was observed in the periosteal and endosteal regions. The advantage of MIPO to preserve the irrigation sanguineo periosteal can favor the early formation  $^3$  callus and mineralization  $^3$ . 2014;9 (3):e91 581. The formation  $^3$  callus occurs in situations of relative stability of the implant construct  $^3$  seo, so it is considered the hallmark of healing  $^3$  n A  $^3$  is secondary[25]. The operations were performed with the animal positioned on the right lateral position. Five photographs were taken from the same area: three fluorescent microscopAa images including the fluorochromes calceAna, red alizarina and tetracycline, a fused image of the three fluorescent labels and a fused image with an image taken from microscopAa of light transmissionA  $^3$  n and the previous fused image. These observations are consistent with other research[30AeA e 32]. Osteoplasty (MIPO) in the treatment of the fracture of the fA© mur where intramedullary nailing is not indicated. Chin Med J (English). Results at 4, 8 and 12 weeks for each group are summarized in Table 2. Sections were observed under scanning microscope confocal lyser for labeled fluorescents (Zeiss LSM710, 19. Dejardin LM, Cabassu JB, Guillou RP, Villwock M, Guiot LP, Haut RC. Javma-Journal of the American Veterinary Medical Association. PMID:18 597 087 23. PMID:21 419 412 26. 26. 13. Severe maladization  $^3$  rotational or frontal angulation  $^3$  both groups were not observed. At 6 weeks, the percentage of TE (yellow) labeling was  $2.65 \pm 0.15\%$  and  $2.58 \pm 0.11\%$  for the MIPO group and the Orific group, respectively (Fig. 3A3 and 3B3), with no significant differences between the two groups (Fig. 4). The specimens were cut into sections  $8 \text{A} @ \text{A} \frac{1}{4} \text{M}$  thick with a microtome (Leica, Hamburg, Germany). 42 male Beagle dogs (2 years old, average weight 16 kg) were divided into two groups in this study. Journal of biomeAonica. Download: Fig 5. A4, B4, C4, and D4 represent merged images of the three fluorochromes for the same group. 2014; 28 (2): 83-9, 2007; 38 (3): 365- 70.  $^3$  research between species of the mechanization  $^3$  healing  $^3$  be  $^3$ : comparison  $^3$  healing  $^3$  is secondary in sheep and rats $^3$  The repair stage, the repair stage begins in about a week of lesiA  $^3$  n. The Beagles were supplied by the University of AgrAcola University of Shanghai Jiao Tong. PMID: 25663020 14. There were significant statistical differences between the two groups (P
